

Environmental Policy

We at FUJI FILTER take our business policy of 'making our employees the happiest in the world', and will establish and realize an environmental policy that will enable each one of us and our children who will support the next generation to realize and sustain the development of a safe and secure environmental society.

1. We will develop and commercialize our own unique "environmentally contributing products" and "reusable products".
2. We will build a systematic system to control chemical substances to prevent environmental pollution.
3. We will reduce resource usage volume and waste, and promote green procurement through continuous improvement of business activities.
4. We will comply with laws and regulations related to environmental requirements.
5. We will actively participate in regional environmental contribution activities and contribute to the local community.

In order to achieve this environmental policy, each department will set environmental targets and we will make efforts to achieve the goal.
